Queue Solutions

Solution 1 :

Time Complexity : o(n)
Space Complexity: o(n)

```java
import java.util.LinkedList;
import java.util.Queue;

public class Solution {
    static void generatePrintBinary(int n){
        Queue<String> q = new LinkedList<String>();
        q.add("1");
        while (n-- > 0) {
            String s1 = q.peek();
            q.remove();
            System.out.println(s1);
            String s2 = s1;
            q.add(s1 + "0");
            q.add(s2 + "1");
        }
    }

    public static void main(String[] args){
        int n = 10;
        generatePrintBinary(n);
    }
}
```

Solution 2 :

Time Complexity : o(n)
Space Complexity: o(n)

```java
import java.util.*;
```

```java
class Solution{
    static int minCost(int arr[], int n){
        PriorityQueue<Integer> pq
            = new PriorityQueue<Integer>();

        for (int i = 0; i < n; i++) {
            pq.add(arr[i]);
        }

        int res = 0;
        while (pq.size() > 1) {
            int first = pq.poll();
            int second = pq.poll();
            res += first + second;
            pq.add(first + second);
        }
        return res;
    }

    public static void main(String args[]){
        int len[] = { 4, 3, 2, 6 };
        int size = len.length;
        System.out.println("Total cost for connecting"
                            + " ropes is "
                            + minCost(len, size));
    }
}
```

Solution 3 :

Time Complexity : o(nlogn)
Space Complexity: o(n)

```java
import java.util.*;

class Solution {
    static class Job {
        char job_id;
        int deadline;
        int profit;
```

```java
        Job(char job_id, int deadline, int profit){
                this.deadline = deadline;
                this.job_id = job_id;
                this.profit = profit;
        }
}

static void printJobScheduling(ArrayList<Job> arr){
        int n = arr.size();
        Collections.sort(arr, (a, b) -> {
                return a.deadline - b.deadline;
        });
        ArrayList<Job> result = new ArrayList<>();
        PriorityQueue<Job> maxHeap = new PriorityQueue<>(
                (a, b) -> { return b.profit - a.profit; });
        for (int i = n - 1; i > -1; i--) {
                int slot_available;
                if (i == 0) {
                        slot_available = arr.get(i).deadline;
                }
                else {
                        slot_available = arr.get(i).deadline
                                        - arr.get(i - 1).deadline;
                }
                maxHeap.add(arr.get(i));
                while (slot_available > 0
                        && maxHeap.size() > 0) {
                        Job job = maxHeap.remove();
                        slot_available--;
                        result.add(job);
                }
        }

        Collections.sort(result, (a, b) -> {
                return a.deadline - b.deadline;
        });

        for (Job job : result) {
                System.out.print(job.job_id + " ");
        }
```

```java
                System.out.println();
        }

        public static void main(String[] args){
                ArrayList<Job> arr = new ArrayList<Job>();

                arr.add(new Job('a', 2, 100));
                arr.add(new Job('b', 1, 19));
                arr.add(new Job('c', 2, 27));
                arr.add(new Job('d', 1, 25));
                arr.add(new Job('e', 3, 15));

                System.out.println("Following is maximum "
                                            + "profit sequence of jobs");
                printJobScheduling(arr);
        }
}
```

Solution 4 :

Time Complexity : o(n+k)
Space Complexity: o(k)

```java
import java.io.*;
import java.util.*;

import java.util.*;

class Solution {

        static class cell {
                int x, y;
                int dis;
                public cell(int x, int y, int dis){
                        this.x = x;
                        this.y = y;
                        this.dis = dis;
```

```java
        }
}

static boolean isInside(int x, int y, int N){
        if (x >= 1 && x <= N && y >= 1 && y <= N)
                return true;
        return false;
}

static int minStepToReachTarget(
        int knightPos[], int targetPos[],
        int N){
        int dx[] = { -2, -1, 1, 2, -2, -1, 1, 2 };
        int dy[] = { -1, -2, -2, -1, 1, 2, 2, 1 };

        Vector<cell> q = new Vector<>();
        q.add(new cell(knightPos[0], knightPos[1], 0));
        cell t;
        int x, y;
        boolean visit[][] = new boolean[N + 1][N + 1];
        visit[knightPos[0]][knightPos[1]] = true;
        while (!q.isEmpty()) {
                t = q.firstElement();
                q.remove(0);
                if (t.x == targetPos[0] && t.y == targetPos[1])
                        return t.dis;
                for (int i = 0; i < 8; i++) {
                        x = t.x + dx[i];
                        y = t.y + dy[i];
                        if (isInside(x, y, N) && !visit[x][y]) {
                                visit[x][y] = true;
                                q.add(new cell(x, y, t.dis + 1));
                        }
                }
        }
        return Integer.MAX_VALUE;
}

public static void main(String[] args){
        int N = 30;
```

```
            int knightPos[] = { 1, 1 };
            int targetPos[] = { 30, 30 };
            System.out.println(
                    minStepToReachTarget(
                            knightPos, targetPos, N));
        }
}
```

Solution 5 :

Time Complexity : o(n)
Space Complexity: o(k)

```java
import java.util.Deque;
import java.util.LinkedList;

public class Solution {

  static void printMax(int arr[], int n, int k){

    Deque<Integer> Qi = new LinkedList<Integer>();
    int i;
    for (i = 0; i < k; ++i) {
      while (!Qi.isEmpty() && arr[i] >=
                arr[Qi.peekLast()])
        Qi.removeLast();
      Qi.addLast(i);
    }
    for (; i < n; ++i) {
      System.out.print(arr[Qi.peek()] + " ");
      while ((!Qi.isEmpty()) && Qi.peek() <=
                        i - k)
        Qi.removeFirst();
      while ((!Qi.isEmpty()) && arr[i] >=
                arr[Qi.peekLast()])
        Qi.removeLast();
      Qi.addLast(i);
    }
    System.out.print(arr[Qi.peek()]);
  }
```

```java
    public static void main(String[] args){
        int arr[] = { 12, 1, 78, 90, 57, 89, 56 };
        int k = 3;
        printMax(arr, arr.length, k);
    }
}
```
